## RegimA Post Op Pack

### Product description

A powerful post-op and scar treatment serum formulated with Centella Asiatica, peptides, and advanced plant extracts to accelerate healing and support healthy collagen synthesis. Helps calm inflammation, reduce redness, and improve the appearance of new or old scars, stretch marks, and damaged skin. Promotes smoother, stronger, and more resilient skin with continued use.

All Skin Types • [Classic / Original Formulation]

\*Classic Products only available in South Africa

### Directions for use

Follow the instructions below or as directed by your medical practitioner.

#### NEW SCARS:

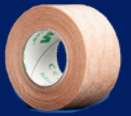

Plastic surgeons have long found that taping new scars with microporous paper tape immediately after suture removal helps reduce scar width and thickness. Scar Repair Forté may be applied over the tape, where it gradually releases onto the scar.

#### Taping Instructions:

For best results, apply Scar Repair Forté over microporous paper tape (unless irritation occurs, in which case use the Serum alone). Taping is especially recommended for those prone to scarring, or for scars in high-tension areas such as the chest, joints, breasts, or abdomen after surgery. When using the Serum alone, begin gentle massage 2–4 times daily (more often for children) immediately after suture removal. Continue daily application until the scar becomes flatter and paler.
